Pilots relative Performance in these BIG5 events
100% means winner of the event
50% means half the points of the winner

PRP with aging applied, with aging factor multiplied: older performances count less than current performances

Substitute from National Ranking List
if no participation at the BIG5 this PRP is taken - leveled to this Nations general performance level within the BIG5
Example: GERMANY shows good performance in the BIG5, so GER pilots get a high level for their substitution if only flying at home.

Filtering the best 3 (or less) performances
averaging the performance of these best (aged PRPs)

in case of a NAC-Substitution, a factor of 50% is applied, so that pilots competing only within their NAC (ranking), cannot easily lead others that compete in the BIG5 events

Consistency is gaged and factored;
For one single result, you get 80%, for two results 90%, and for three, you get 100%

This gives the intermediate points within the calculation which are scaled to 1.000 points for the winner (as common in the task scoring formula)
all others are scaled relative to their performance: one with 20% less intermediate points than the winner gets 800 points -- for easy performance comparison.
